Attachment band in plastic to be used with heating cables.

DESCRIPTION

Attachment band for heating cables. 1 meter long made of black UV resistant plastic. Ideal for attaching heating cables to a roof/surface or in wide gutters/drains (more than 15 cm). It is 25 mm between each attaching point for heating cables, so the minimum CC distance will be 75 mm. The band can be cut and adjust on site. Longer lengths can be obtained by connecting bands to each other, using the snap-in connections at either end of the bands.
