

## TESTBOY TV 350

### Digital Anemometer

The Testboy TV 350 is the ideal assistant in heating, ventilation and air conditioning construction. In addition to the wind speed, it is possible to measure moisture, ambient temperature, dew point temperature and air volume. The measurement values can be recorded via the integrated USB interface and the supplied software. The units of measurement can be switched to standard international values.

#### How you benefit:

- | Illuminated LC display
- | Min/max value memory
- | USB interface for evaluation of the data on a PC (Windows)
- | Clever additional functions

#### Specifications
